

City of Oconomowoc, WI

As your community grows, so do the demands placed on your wastewater infrastructure. Unfortunately, an increase in demand rarely accompanies an increase in your utility budget.

At Ruekert & Mielke, Inc. (R/M), our experts consider the capacity, reliability, operation/maintenance, energy, and safety during the planning, design, and construction of every engineering project.

Our team has the advanced understanding of treatment facility unit processes, nutrient removal technologies, and nutrient compliance alternatives necessary to help your municipality increase the efficiency of your wastewater infrastructure and stretch your rate-payer dollars.
